CM2W API Documentation: Total Quantity Report

Introduction
This API provides access to the Total Quantity Report of the facilities, accessible through a specific organization in the CM2W platform.

Base URL
https://dev.cm2w.net/cm2w-api/v2/api-key-auth

Authentication
Make sure to replace <API Key> in the Authorization header with the actual API key.

```
headers: {
        'Authorization': 'Bearer <API Key>'
}
```

Response
All responses from the API are in JSON format.

Endpoint: /total-qty-report
Method: **GET**

Retrieve the Total Quantity Report grouped by facilities.

Query Parameters
- **pageNumber** (required): The page number for paginated results.
- **pageSize** (required): The number of records per page.
- **fromDate** (required): The start date of the report range in milliseconds since epoch (e.g., 1640988000000).
- **thruDate** (required): The end date of the report range in milliseconds since epoch (e.g., 1648760399000).
- **reportType** (required): Specifies the report type as "total-qty-facility".
- **facilityId** (optional): Specifies the id of a specific facility under the viewed organization.
- **deviceId** (optional): Specifies the id of a specific device, which is owned by a facility under the viewed organization.

Example response

```
{
  "statusCode": "SUCCESS",
  "data": {
    "results": [
      {
        "_id": 13279,
        "facilityId": 1,
        "facilityName": "TEST",
        "lq": 0,
        "lQty": 0,
        "w0": 0,
        "products": [
          {
            "_id": 1,
            "productId": 1,
            "name": "PRODUCT 1",
            "qty": 39930,
            "price": 0.0,
            "cur": "eu"
          },
        ],
        "tsd": "1647043200000"
      },
    ],
    "startIndex": 0,
    "endIndex": 1,
    "itemCount": 1
  },
  "message": null,
  "errors": null,
  "errorCode": null,
  "currentTime": 1705583310053
}
```

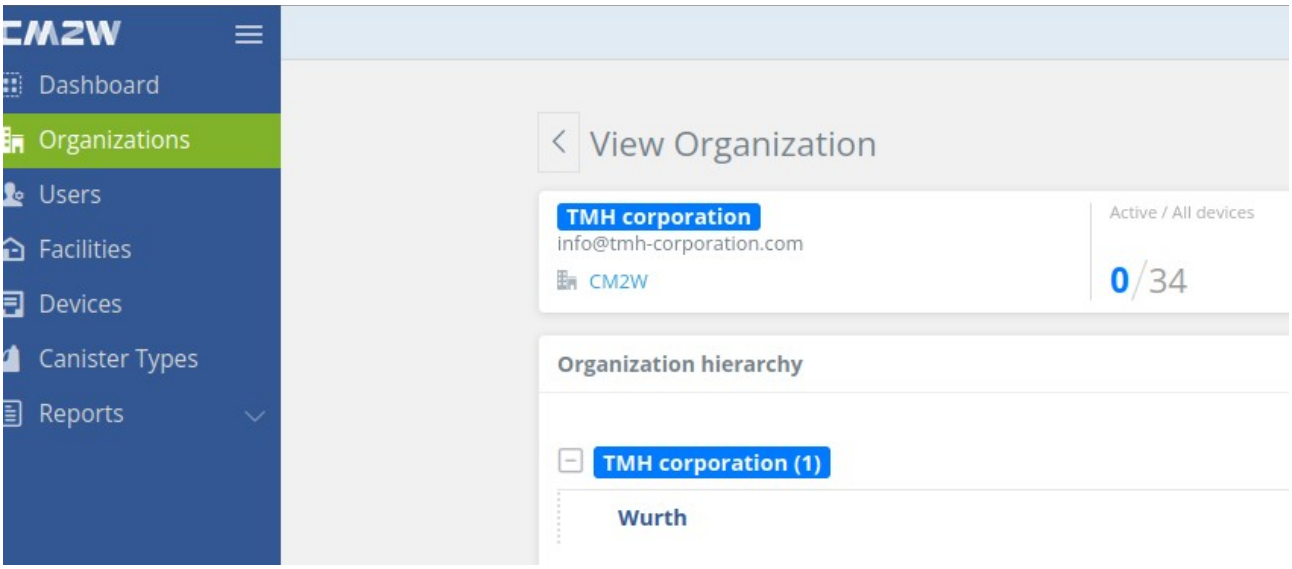
Response data format

- **statusCode:** Status of the API request.
- **data:** Contains the Total Quantity Report grouped by facilities.
- **results:** Array of facilities with their total quantities and product details.
- **products:** Array of products with their quantities, prices, and currency.
- **tsd:** Timestamp in milliseconds indicating the date of the report.
- **product –** describe a product and its fields. Each element from array products is a product.
  - **id –** product identifier
  - **name –** name of the product
  - **qty –** dosed quantity of the product for certain facility in the specified time period. Unit of measurement(UOM) is 0.1ml
  - **price -** total price of the dosed product
  - **cur –** currency

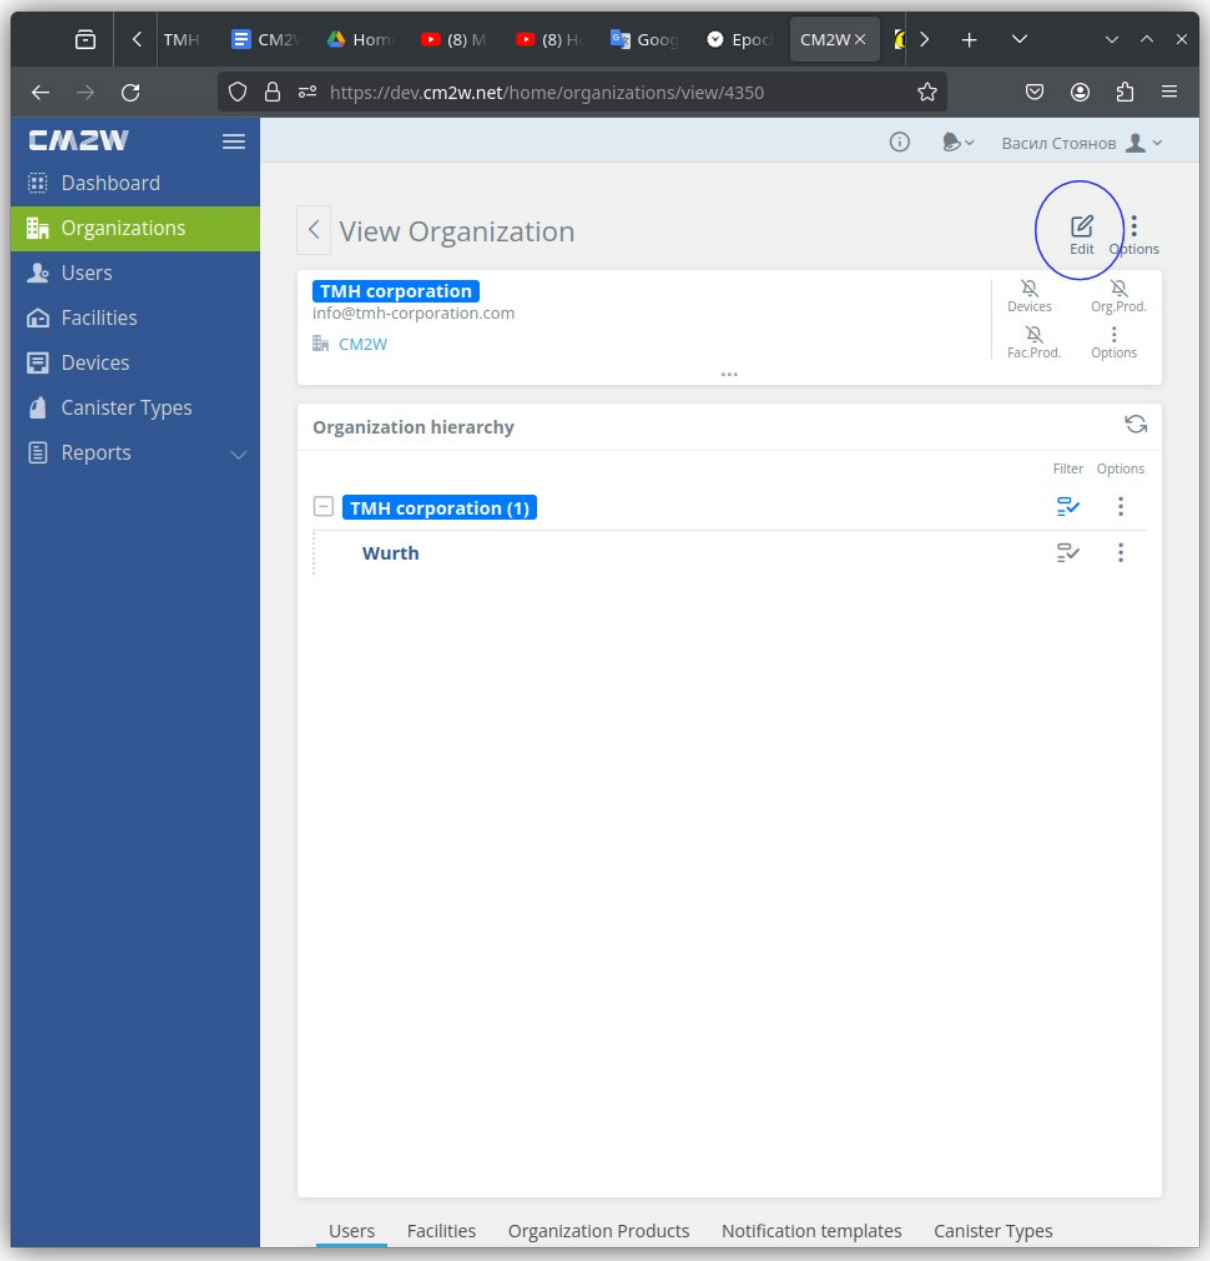
Generate and use the API key

In order to enable and generate an API key which will give you access to the facilities in certain organization(the API key is related to an organization. In this way you can have granulated access to different organizations and sub-organizations) you have to:

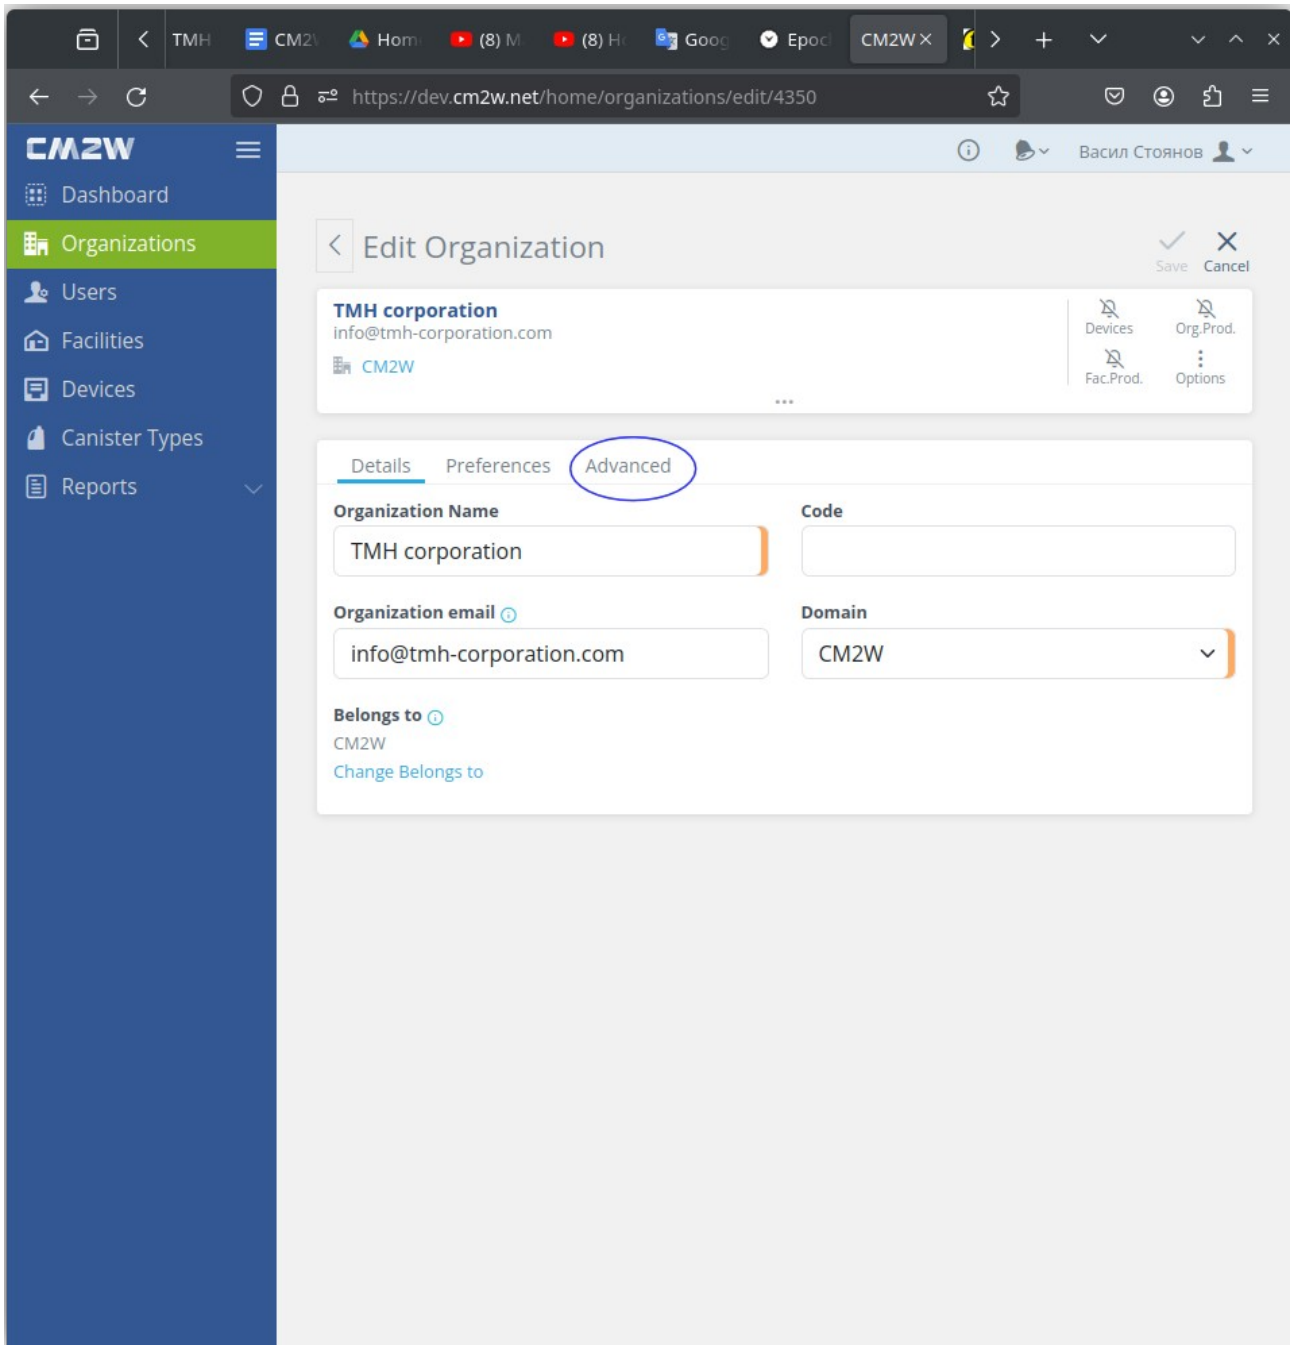
1. Find the organization:



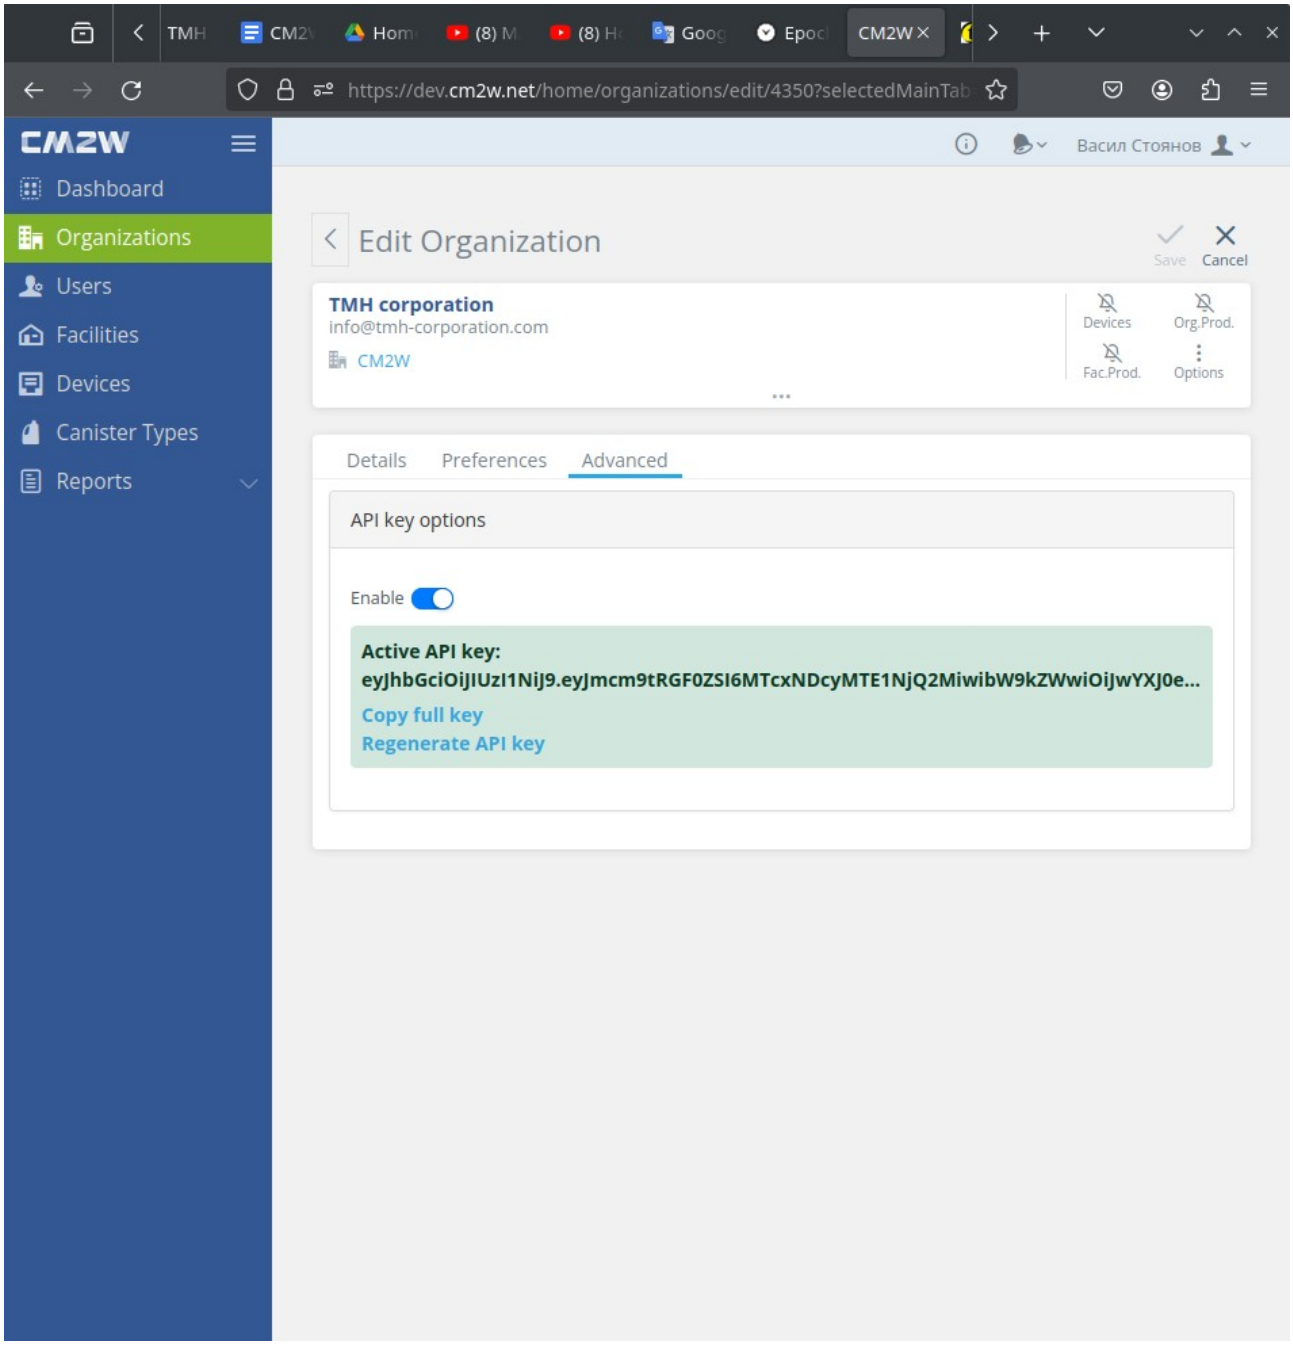
2. Enter Edit mode – press Edit button



3. Select Advanced tab



4. Enable, generate and copy the API key



5. Use the API key as it is described above
